11 - Spring Cloud Config-Get updated config file by dynamic refresh

11.1 Dynamic refresh by using Config+Bus

Spring Cloud Bus is also known as the message bus. It can connect various services in the microservice architecture through lightweight message brokers (such as RabbitMQ, Kafka, etc.), and realize broadcast status changes, event push and other functions. It can also realize Communication functions between microservices.

Currently Spring Cloud Bus supports two message brokers: RabbitMQ and Kafka.
